AREA OF A RECTANGLE

The area of a rectangle is length times width. If the length is 8 cm and the width is 5 cm, the area is 40 square centimetres. Area counts the unit squares that fill the shape. Keep the square unit with the number: 40 cm^2 is not the same as 40 cm.

CHECK THE FORMULA

Cover the page and say it: area equals length times width. If the width became 6 cm and the length stayed 8 cm, the area would be 48 square centimetres.
